Introducing The KILL-A-WATT™ Electric Usage Monitor

<u>DISPLAY CYCLES</u>
Voltage (volt)
Amperage (amp)
Wattage (watt)
Line frequency (Hz)
Power factor (VA)

THE PRODUCT

Kill-A-Watt™ Electricity Usage Monitors

The SMLD supports customer energy conservation; and we have purchased 10 (ten) Kill-A-Watt™ Electricity Usage Monitors to help our customers reduce their energy costs by identifying the real energy abusers in their homes or businesses. The device allows you to monitor the kilowatt-hour consumption of an appliance to help you learn how much it costs to run. You can determine its electrical expenses by day, week, or month and can also cycle through different displays including: voltage (volt), amperage (amp), wattage (watt), line frequency (Hz), and power factor (VA).

Simply plug the Kill-A-Watt™ Electricity Usage Monitor into a three-prong, grounded wall outlet, plug your electrical product into it, and then find out how efficient (or wasteful) it is.

We welcome our customers to come into our office to borrow a Kill-A-Watt™ Electricity Usage Monitor **free-of-charge!** It may help you to reduce your energy costs. You may also purchase one at our office for \$35. Call our Customer Service Department at 978-422-8267 for more information.

Enjoy the following benefits:

- Easy to use
- Free, two (2) week lending period from the SMLD
- Save energy by making better decisions
- Monitor electric consumption
- Large LCD display
- Enables cost forecasting
